Network Bandwidth

- ▶ Symetric or different up/down speeds
- ▶ Consistent or uneven
- ▶ Always available or sometimes offline

My Setup

- ▶ 50 megabits per second (Mbps) down and up
- ▶ Sometimes offline due to upgrades, power failure
- ▶ Occasional heavy demand

Managing Heavy Demand

Increasing Bandwidth

- ▶ Dynamically increasing bandwidth is usually difficult
- ▶ You need to repoint your content to another location that always has more bandwidth
- ▶ Cloud providers usually have high bandwidth

Some Terms

- ▶ Subdomains
 - ▶ `www.momjian.us` is a subdomain of `momjian.us`
 - ▶ `pickle.momjian.us` is a subdomain of `momjian.us`
- ▶ DNS (domain name service) maps domain names to IP addresses
 - ▶ `momjian.us` maps to IP address `72.94.173.45`
 - ▶ a CNAME record maps one hostname to another
- ▶ Apache is a daemon that serves web pages

Let's Use Amazon Web Services (AWS)

- ▶ Lots of acronyms
- ▶ Simple Storage Service (S3)
- ▶ CloudFront
- ▶ ~~EC2~~
- ▶ ~~EBS~~

How Do We Reroute Our Content?

- ▶ Create an Amazon S3 bucket
- ▶ Create a subdomain for the content
- ▶ Copy our content to the S3 bucket
- ▶ Setup disabled webserver rules to reroute subdomain requests to S3
- ▶ Setup disabled DNS rules to reroute subdomain content to S3

Hostnames

- ▶ external.momjian.us
- ▶ external.momjian.us.s3.amazonaws.com
- ▶ download.momjian.us
- ▶ d2mt7v560udp.cloudfront.net

Welcome to Amazon Simple Storage Service

Amazon S3 is storage for the Internet. It is designed to make web-scale computing easier for developers.

Amazon S3 provides a simple web services interface that can be used to store and retrieve any amount of data, at any time, from anywhere on the web. It gives any developer access to the same highly scalable, reliable, secure, fast, inexpensive infrastructure that Amazon uses to run its own global network of web sites. The service aims to maximize benefits of scale and to pass those benefits on to developers.

You can read, write, and delete objects ranging in size from 1 byte to 5 terabytes each. The number of objects you can store is unlimited. Each object is stored in a bucket with a unique key that you assign.

Get started by simply creating a bucket and uploading a test object, for example a photo or .txt file.
